

The Next Generation of Bullet Proof SSD Upgrades Have Arrived

MyDigitalSSD proudly introduces the BP4, the 4th generation of their critically acclaimed and award-winning Bullet Proof line of solid state drives.

BP4 SSDs feature SATA III 6Gb/s performance in **2.5" Slim 7mm** and **50mm mSATA** form factors to increase user productivity up to 70X. Backwards compatible with SATA II applications, the BP4 eliminates the bottle-neck found in stock hard drives; making them an ideal upgrade solution for many of today's **Tablets, UltraBooks, Hybrids** (HDD/mSATA Notebooks), and **Desktop PCs**.

Unlike their predecessors, BP4 drives have been over provisioned for improved Random Read/Write performance and IOPS, extended performance endurance to reduce sluggishness as the drive fills with data, prolonged drive life, reliability, and low power consumption - all at the unequaled price to performance ratio synonymous with MyDigitalSSD Bullet Proof SSDs.

60GB: \$64.99 | 120GB: \$99.99 | 240GB: \$179.99

BP4 drives are now available at MyDigitalDiscount.com, Amazon.com, and will be coming soon to MyDigitalSSD retailers worldwide.

See what the experts have to say about the BP4 Series

Chris Ramseyer of TweakTown:

"Taking it to the big boys where it counts, low queue depths."

Les Tokar of The SSD Review:

"The MyDigitalSSD BP4 is the best value we can find for an SSD on the market today and its price point is such that it will attract customers who just may not have been there with a higher pricing model."
