## **12/16/15: New Product Announcement**

### **MyDigitalSSD BP5e Slim 7 Series 2.5" SATA III (6G) SSD**

MyDigitalSSD Bullet Proof 5 Eco (BP5e) Slim 7 (7mm) Solid State Drives, available in 240GB-960GB, are value upgrade solutions for Notebook and Desktop users who demand more from their PC or Mac.

Featuring the new Phison S10 (PS3110-S10) controller, paired with Toshiba TLC Toggle 2.0 NAND Flash, these easy-to-install 2.5-inch SATA III 6Gb/s SSDs offer performance well beyond their price tag with transfer speeds up to 565MB/s. Additionally, upgrading to a BP5e improves boot and application load times to boost overall user productivity 70X compared to a spinning hard drive.

Each BP5e Slim 7 drive comes over-provisioned for improved Random Read/Write performance and IOPS, extended performance endurance to minimize sluggishness as the drive fills with data, prolonged drive life, added drive reliability, and low power consumption.

Backwards compatible with SATA II applications; BP5e Slim 7 series drives offer 9.5mm drive screw hole alignment to upgrade virtually any notebook with a 2.5" SATA port or SATA desktop workstation using a standard mounting adapter bracket.
