MyDigitalSSD SBXe NVMe M.2 SSD Lineup Now Offers Improved Performance and 1TB Storage Capacities

MyDigitalSSD continues to raise expectations of consumer-grade performance with BIG changes to our Super Boot eXpress Eco (SBXe) PCI Express NVMe M.2 SSD lineup.

Initially powered by the Phison E8T (PS5008-E8T) controller, MyDigitalSSD SBXe series solid-state drives will now feature the Phison E13T (PS5013-E13T) controller with a 4-lane PCIe 3.1 NVMe interface and 3D NAND flash for improved sequential speeds of up to 2,500MB/s (2.5GB/s) read and 2,100MB/s (2.1GB/s) write.

Nearly 60% and 150% faster than their previous bests, 1600MB/s read and 850MB/s write, E13T SBXe upgrades provide double the bandwidth for noticeably more responsive user experience at 4X the best SATA can offer.

But that's not all, speaking of BIG, SBXe series drives will now be available up to 1TB (1920GB) storage capacities in the same space-saving single-sided M.2 form factor ideal for today's thinnest ultraportable notebooks and desktop PC builds, backed by a 5-year warranty.

Power-efficient and packed with data protection features, MyDigitalSSD SBXe drives are perfect for a variety of workloads from everyday multitasking to professional media editing and high-end gaming.

These re-released SBXe 80mm (2280-S2-M) M.2 SSDs will begin shipping early October 2019 with 42mm (2242-S2-M) options available later this year.
